## Overview

Applied Behaviour Analysis (ABA) is one of the most well-known behavioural psychology methods in the world. Indeed, it's consistently used to help those on the autism spectrum to successfully attain and maintain target behaviours. This comprehensive and insightful course is designed to get you started with Applied Behaviour Analysis fundamentals and strategies and how to implement them.

## TOPICS COVERED

- Introduction to ABA
- 7 dimensions of ABA
- Define behavior
- Principles of learning
- Reinforcement, Punishment & Extinction
- Teaching language and social skills to children
- Instructional Strategies
- Introduction to DTT
- Behavior management strategies
- Functions of Behavior

## Who Would Benefit from the Course?

The Applied Behaviour Analysis Course has been created to give parents, caregivers and learning assistants of ASD children a better understanding of the techniques involved in the practice and how they are implemented. It also provides a solid foundation of knowledge for those who would like to take further study in their pursuit of a career as an ABA Tutor or Therapist, or a Behavioural Psychologist.

## Who is this Course For?

This is for anyone. Teachers, shadow teachers, learning assistants, parents.

## Acceptance & Attestations

The course is accredited by the *Knowledge & Human Resource Development Authority of Dubai – Government of Dubai*.
